RESEARCH EXPERIENCE

Postdoctoral Researcher and Teaching Fellow – Université Paris-Est Créteil, ERUDITE 2024-26

I estimate the social cost of air pollution over the French metropolitan territory based on individual health care expenditures, using a sample from the French National Health Data System (SNDS). This project is a baseline to assess emission reduction policies, we currently work on the low-emission zone efficiency. ; project APOCALYPSE, funded by the French Ministry of Health and Social Protection.

PhD Scholarship – Université Côte d'Azur, CNRS, GREDEG 2021-25

I study the effects of workers' mobility and their choices of residence on the environment and environmental inequality, particularly in light of the rise of telework (built on individual linked employer-employee microdata with DADS data), natural amenities, and local concentrations of air pollution, which are estimated using quasi-experimental methods applied to French municipal panel data; funded by the UCAJedi Excellence Initiative fellowship.

Research Assistant – Université Côte d'Azur, CNRS, GREDEG 2020-21

I assess the environmental damage caused by anticompetitive practices in the context of the European heavy-duty truck manufacturers' cartel case, drawing on regional European data.
